**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yabuki et al. (Yabuki, Japanese Patent Document No, 59-70744).

Yabuki teaches an alloy composition comprising, in weight percent,

C	2 to 3%,
Cr	10 to 28%,
Fe	1 to 30%,
W	0.1 to 17%,
Mo	0.1 to 8.0%,
Ti	0.01 to 4.5%,
Al	0.01 to 4.5%, and
Ni	the balance along with inevitable impurities (see the English language abstract).

Yabuki's alloy overlaps the alloy composition recited in applicants' claims.

Yabuki and the claims differ in that Yabuki does not teach the exact same proportions as recited in the instant claims, does not teach "a weight member for a golf club head" and is silent with respect to "precision casting".

However, one of ordinary skill in the art at the time the invention was made would have considered the invention to have been obvious because the alloy proportions taught by Yabuki overlap the instantly claimed proportions and therefore are considered to establish a prima facie case of obviousness, in that it would have been obvious to one of ordinary skill in the art to select any portion of the disclosed ranges including the instantly claimed ranges, from the ranges disclosed in the prior art reference, In re Peterson 65 USPQ2d 1379 (CAFC 2003, In re Geisler 43 USPQ2d 1365 (Fed. Cir. 1997); In re Woodruff, 16 USPQ2d 1934 (CCPA 1976); In re Malagari, 182 USPQ 549, 553 (CCPA 1974) and MPEP 2144.05. It is the Examiner's position that the claim limitation "weight member for a golf club head" is not clearly defined in the specification. In view of this, the term, "weight member for a golf club head" does not limit the claim to any particular structure that distinguishes the claimed invention from the alloy in any cast form. Regarding "precision casting" it is the Examiner's position that this language is a process limitation in a product claim, thus applicants' claims are product by process claims. The process limitations recited in the instant product by process claims do not necessarily lend patentability to the claimed product, MPEP 2113.
